

RSO VS. CO2 DABLICATOR

**GOOD PEOPLE.
GOOD CANNABIS.
GOOD DAY.**

 www.gooddayfarm.com

Good Day Farm and Dablicator are on a mission to provide patients with better, more adaptable options for cannabis consumption. Designed to replace a messy and sketchy-looking syringe, the Dablicator is ideal for all cannabis oils, including RSO and CO2, and the applicator makes it easy to repeat your optimum dose. Just twist, click, and push for a repeatable dose every time.

- Each black line on the plunger is approximately 55mg of oil, while the final, red line is approximately 165mg of oil. Remember that dosing is dependent on the potency of the oil — for example, an 80% THC oil would be $\sim 55\text{mg} \times 80\% = \sim 44\text{mg}$ of THC. As with all dosing, start small and dial in your desired dose amount.
- The heat-resistant, metal Direct Dab Tip allows for a direct application of oil.
- The shatter-resistant, BPA-free tank keeps medicine safe.
- The small, discreet size and tank design means you can bring your medicine with you where you need it.

The **RSO Dablicator** from Good Day Farm contains the highest quality full-spectrum, ethanol-extracted cannabis oil, making it ideal for edible or topical use. RSO (Rick Simpson Oil) is known to deliver potent amounts of THC, which may be beneficial for those who are seeking serious relief. RSO is traditionally a full-spectrum, high-THC product, and thanks to the Good Day Farm RSO Dablicator, more patients can benefit from the medicinal qualities RSO has to offer while ensuring they're buying safe, reliable extracts. Examples of how to use the concentrate within the RSO Dablicator include mixing a small amount directly into food or beverages, or applying directly to the body.

The **CO2 Dablicator** from Good Day Farm contains full-spectrum cannabinoids and a high percentage of terpenes, delivering a unique strain-specific flavor and premium vaporization experience. The CO2 Dablicator has many benefits when it comes to smoking, providing an enhanced entourage effect while also allowing consumers to choose the method of inhalation that best suits them. Examples of how to use the concentrate within the CO2 Dablicator include dispensing the preferred amount on top of a bowl of ground flower, lining a pre-roll, or using a vaporization device.
